WARRANTY POLICY, SUPER HOODS

Battery Mounting Brackets

Three kinds in field.

- (1) Round Mounting Holes, 3/16" rod.
- (2) Slotted Mounting Holes, 3/16" rod.
- (3) Slotted Mounting Holes, 1/4" rod.
(this is current production).

Problem: Hood interferes with Fuel Tank and does not come down far enough to attach new rubber hood bumpers effectively.

Solution: Battery Mounting Brackets with round mounting holes and 3/16" rod and Battery Mounting Bracket with slotted holes and 3/16" rod may be exchanged at the Station or Factory beginning June 17, 1963, for the current production Battery Mounting Bracket with slotted holes, 1/4" rod, and welded gussets. The current production Battery Mounting Bracket solves the problem shown above.

Customer Tractors: If you have customers who have problems with Super Hood fits, Hoods staying on, rattling, and so forth, you may:

Exchange the Battery Mounting Bracket currently on the Tractor for the current production Battery Mounting Bracket with the slotted holes, 1/4" rod, and welded gussets. This, plus the new hardware, should solve the problem. Gravelly will pay you \$2. for each customer Tractor converted. To obtain this warranty payment you must furnish us with the complete name and address of the customer, serial and manufacturing number of the Tractor, and date of purchase. Address your requests for warranty payment to T. A. Gaylor, Sales Manager.

Super Hood Hardware

Problem: Clips will not hold Super Hood on Tractor. Rod bends or breaks.

Solution: Rods have been changed. See above. Spring-type Clips have been changed to a solid Hinge. New hardware will be furnished with Starter Kits as of this date at the Station or Factory. Starter Kits, beginning June 17, 1963, will contain Battery Mounting Bracket with slotted mounting holes, 1/4" rod, and welded gusset.

You may exchange any stock of old style spring-type Clip, Part Number ST-128, for new ST-134 Hinge at the Station. New hardware is now available at the Stations.
